**LESSON HANDOUT**

Demonstration - S&P 500 dataset

This handout will cover some of the additional learnings from the **Demonstration - Applying Descriptive Statistics** lesson

## Advanced Power Query

Load table into Power Query

- Data > From table / range

Remove Columns

- Use the button to remove the highlighted columns. Use Ctrl + click to select multiple columns.
- Alternatively, use 'Remove other Columns' to **keep** the highlighted columns and remove the others.

Filter Rows

Just like in a table or a set of data in Excel, you can filter your rows of data by clicking on the chevron (downwards arrow) and selecting the data.
